

DeWitt Asia Styrene and Styrenics Review 2005 - 2015

DeWitt & Company has recently completed an Asian Styrene and Styrenics Review. We analyzed the markets during the past 3 years and 2008 and made projections until 2015. The impact of Middle East Styrene is covered in this Study. The dramatic changes during 2008 were covered in detail; a period when styrene price dropped by more than \$1,000/MT in less than six months and when producers of styrenics were forced to shut down or reduce operating rates to 50% to 60% all over Asia.

The Study is available now at the cost of \$6,000 and will be sent via email in a PDF format.
